

Analytics and commercial Insights of Task 1&2

Presented by Usman Ahmad

Executive Summary

- **Task 1: Customer & Purchasing Behavior Insights:**
- Core Driver: Older Families (Budget & Mainstream tiers) are the primary volume drivers, generating the highest total revenue.
- Highest Value: Young Families spend the most per customer annually (\$34.69) across all segments, indicating strong loyalty and basket size.
- Product Preferences: The 175g pack size is overwhelmingly the category anchor, and Kettle is the dominant brand across all analyzed customer segments

Continue....

- **Task 2: Trial Store Performance (Stores 77, 86, 88):**
- Positive Directional Uplift: All three trial stores outperformed their matched control stores in Total Sales, Customer Count, and Transaction Volume during the trial period.
- Top Performer: Store 77 showed the strongest results, with a +29.13% increase in total sales compared to its control.
- Statistical Caveat: Due to the short three-month trial window, the results for Store 77 did not achieve statistical significance ($p > 0.05$). A cautious, monitored rollout is recommended.

Category Overview

- The Chips category generated \$1,933,109 in total revenue over FY 2018-19 with 264,833 transactions.
- Sales volume is driven predominantly by Older Families, while Young Families represent the highest average annual spend per customer (\$34.69).
- The 175g pack size is the category anchor, and Kettle is the dominant brand across all customer segments.

Customer Segments: Affluence & Life Stage

- **Mainstream Dominance:** The Mainstream tier is the largest affluence group, making up 40.3% of the customer base (29,245 customers).
- **Volume Drivers:** Older Families in the Budget and Mainstream tiers generate the highest total sales volume and absolute revenue.
- **Value Drivers:** Regardless of affluence tier, Young Families have the highest average annual spend per customer (~\$34.00 - \$34.69), showing strong loyalty and larger basket sizes.
- **Notable Segments:** Mainstream Young Singles/Couples drive high volume with the highest average transaction value (\$7.56), while Budget Young Singles/Couples underperform (\$16.18 annual spend).

Trial Store Performance

- **Methodology:** The trial ran from February to April 2019. Trial stores were matched to control stores based on pre-trial sales trends, customer counts, and transaction volumes.
- **Control Matchings:** > * Trial Store 77 matched with Control Store 233
- Trial Store 86 matched with Control Store 155
- Trial Store 88 matched with Control Store 237
- **Overall Performance:** All three trial stores consistently outperformed their matched control stores across Total Sales, Number of Customers, and Number of Transactions during the trial window.

Trial Store Success: Customer Growth & Verdict

- **Success Verdict:** The trial was directionally successful. All three trial stores experienced positive growth in customer numbers compared to their control counterparts.
- **Customer Growth:** Store 77 saw the highest uplift, increasing customer traffic by +23.48%. Store 86 (+13.54%) and Store 88 (+5.75%) also demonstrated reliable gains in unique customer visits.
- **Recommendation:** Proceed with a cautious, monitored rollout. While percentage uplifts were strong, the short three-month trial window limited statistical power ($p > 0.05$). Extending the monitoring period is recommended before a full network rollout.
